

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A portable terminal device comprising ~~including a light emitting section in a case thereof, comprising:~~

~~a space section formed in the case; and~~

~~a case;~~

~~a light emitting section within the case;~~

~~a window section formed in a surface of the case; and, through which light emitted from the light emitting section is transmitted, wherein~~

~~a wiring board located in the case, the light emitting section being positioned above a surface of the wiring board,~~

~~wherein the light emitting section has a light emitting surface directed in a direction that is at an angle greater than zero degrees to the surface of~~ direction along a surface of a ~~wiring board above which the light emitting section is positioned~~ located in the case.

2. (original): The portable terminal device according to claim 1, wherein the light emitting section is attached to the wiring board.

3. (currently amended): The portable terminal device according to claim 1, further comprising a space section in the case, wherein the space section is an oblong~~flat~~ space.

4. (currently amended): The portable terminal device according to claim 1, further comprising a space section in the case, wherein the light emitting section is disposed in the space section.

5. (original): The portable terminal device according to claim 1, wherein the light emitting section emits at least any one of red, green, and blue light beams.

6. (currently amended): The portable terminal device according to claim 1, wherein the light emitting section is a light emitting diode of a side emitting type.

7. (currently amended): The portable terminal device according to claim 1, wherein the light emitting section is a light emitting diode of a surface emitting type.

8. (original): The portable terminal device according to claim 1, wherein the window section is translucent.

9. (original): The portable terminal device according to claim 1, wherein the window section is creamy white.

10. (currently amended): The portable terminal device according to claim 1, wherein the light emitting section ~~emits~~includes a means for emitting light when a call arrives at the portable terminal device.

11. (new): A portable terminal device comprising:

- a case;
- a window section formed in a surface of the case;
- a light mixing space having a plurality of surfaces within the case, at least a portion of said light mixing space being substantially adjacent to the window section; and
- a light emitting section positioned such that a substantial portion of the emitted light directly impinges on at least one of the plurality of surfaces of the light mixing space.

12. (new): The portable terminal device according to claim 11, wherein the light emitting section is located substantially above a wiring board within the case and the light mixing space is located substantially between the window section and an edge of the wiring board.
